# Problem Decomposition and AND/OR Graphs

- ⊙ **AND/OR graph representation of problems**
- ⊙ **Examples of AND/OR representation**
- ⊙ **Basic AND/OR search procedures**
- ⊙ **Best-first AND/OR search**

# AND/OR graph representation

## © Areas of use

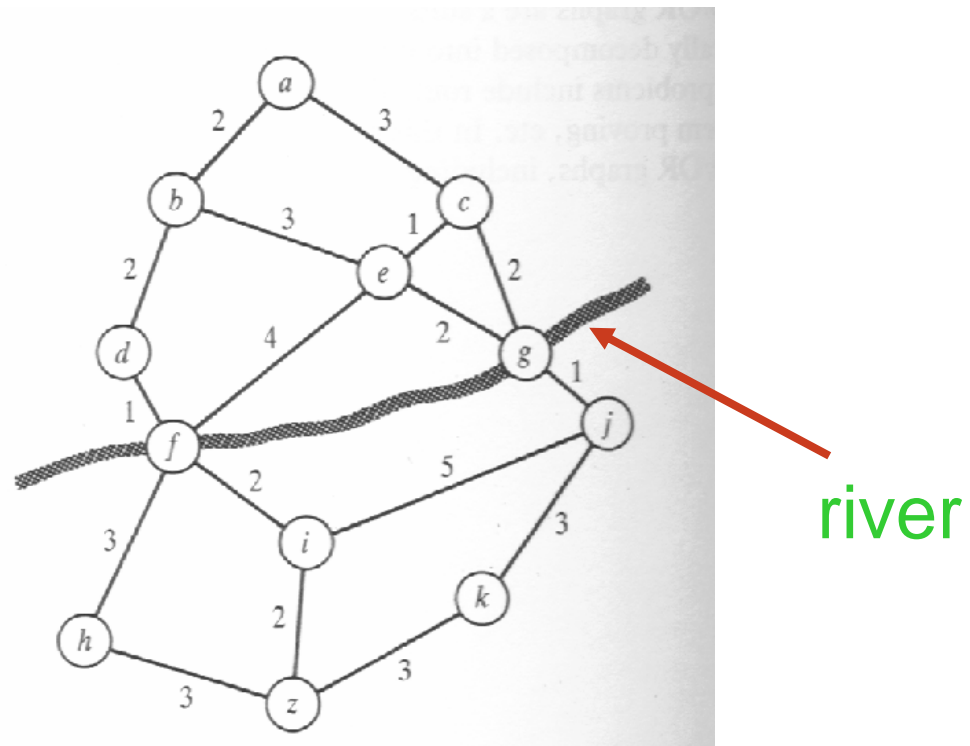

- ◆ Route Finding
- ◆ Design
- ◆ Symbolic Integration
- ◆ Game Playing
- ◆ Theorem Proving

# AND/OR graph representation

## © Finding a route from **a** to **z** in a road map

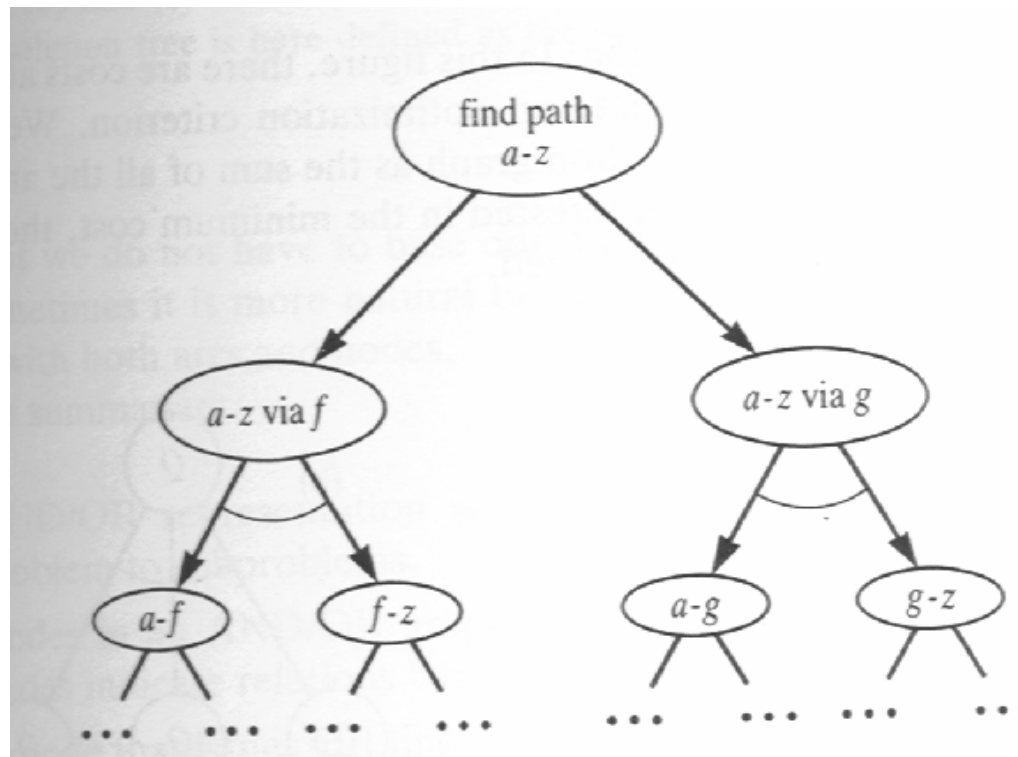

To find a path between a and z, find *either*

- (1) a path from a to z via f, or
- (2) a path from a to z via g.

# AND/OR graph representation

## © An AND/OR representation

# AND/OR graph representation

## © OR and AND relations

to solve  $P$ , solve any of  $P_1$  or  $P_2$  or ... to solve  $Q$ , solve all  $Q_1$  and  $Q_2$  ...

# AND/OR graph representation

## © Solution

- ◆ In the state-space representation, a solution to the problem is a path in the state space.
- ◆ In the AND/OR graph representation, a solution is a tree that includes all the subproblems of an AND node.

# AND/OR graph representation

⊙ An AND/OR graph and two solution trees

cost = 9

cost = 8

# Examples of AND/OR representation

## ◎ AND/OR representation of route finding

- ◆ OR nodes of the form  $X-Z$
- ◆ AND nodes of the form  $X-Z$  via  $Y$
- ◆ A **goal** node  $X-Z$
- ◆ The **cost** of each goal node  $X-Z$
- ◆ The **costs** of all other (non-terminal) nodes

# Examples of AND/OR representation

## © AND/OR representation of route finding

[a,b,d,f,i,z]

# Examples of AND/OR representation

## © The Tower of Hanoi problem

- ◆ the set of goals
  - Disk a on peg 3
  - Disk b on peg 3
  - Disk c on peg 3

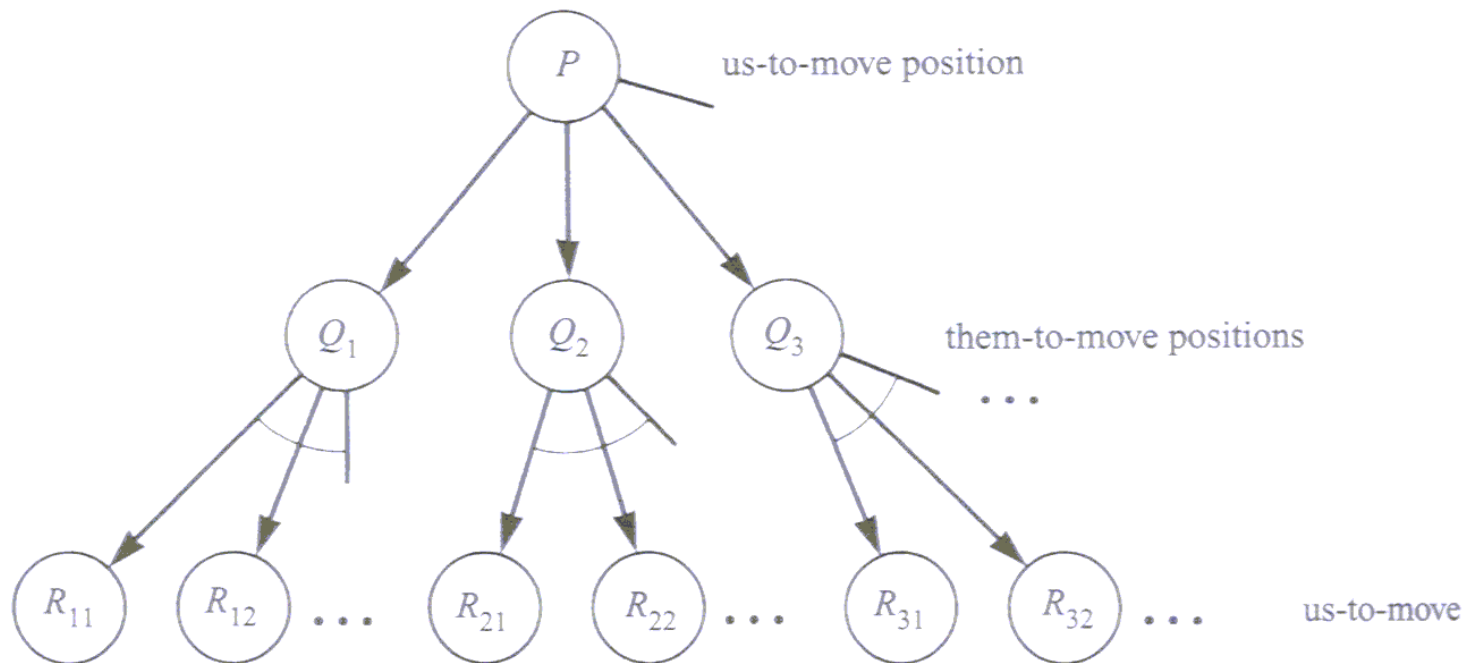

# Examples of AND/OR representation

## ◎ The Tower of Hanoi problem

- ◆ Refined strategy
  - Enable moving disk  $c$  from 1 to 3
  - Move disk  $c$  from 1 to 3
  - Achieve remaining goals:  $a$  on 3, and  $b$  on 3
- ◆ How?

# Examples of AND/OR representation

## © AND/OR formulation of game playing

# Basic AND/OR search procedures

## ◎ Searching AND/OR graphs in Prolog

- ◆ Use Prolog's own search mechanism

a :- b.

a :- c.

b :- d, e.

e :- h.

c :- f, g.

f :- h; i.

d.

g.

h.

?- a.

# Basic AND/OR search procedures

## ◎ Searching AND/OR graphs in Prolog

- ◆ Use Prolog's own search mechanism
  - Problems
    - producing a solution tree
    - handling costs
    - dealing with cycles

# Basic AND/OR search procedures

## ◎ Searching AND/OR graphs in Prolog

- ◆ Introducing the operator '--->'

```
:- op(600, xfx, --->).
```

```
:- op(500, xfx, :).
```

```
a ---> or: [b,c].
```

```
b ---> and: [d,e].
```

```
c ---> and: [f,g].
```

```
e ---> or: [h].
```

```
f ---> or: [h,i].
```

```
goal(d).
```

```
goal(g).
```

```
goal(h).
```

# Basic AND/OR search procedures

## ⊙ Searching AND/OR graphs in Prolog

- ◆ the depth-first AND/OR procedure

```
solve(Node) :- goal(Node).
```

```
solve(Node) :- Node ---> or:Nodes,  
               member(Node1,Nodes),  
               solve(Node1).
```

```
solve(Node) :- Node ---> and:Nodes,  
               solveall(Nodes).
```

```
solveall([ ]).
```

```
solveall([Node|Nodes]) :- solve(Node),  
                          solveall(Nodes).
```

# Basic AND/OR search procedures

## ⊙ Searching AND/OR graphs in Prolog

- ◆ producing a solution tree

```
solve(Node, Node) :- goal(Node).
```

```
solve(Node, Node ---> Tree) :-
```

```
    Node ---> or:Nodes,
```

```
    member(Node1, Nodes),
```

```
    solve(Node1, Tree).
```

```
solve(Node, Node ---> and:Trees) :-
```

```
    Node ---> and:Nodes, solveall(Nodes, Trees).
```

```
solveall([ ], [ ]).
```

```
solveall([Node|Nodes], [Tree|Trees]) :-
```

```
    solve(Node, Tree), solveall(Nodes, Trees).
```

# Basic AND/OR search procedures

## ⊙ Searching AND/OR graphs in Prolog

- ◆ limiting the depth of search

```
solve(Node, Node, MaxDepth) :- goal(Node).
```

```
solve(Node, Node ---> Tree, MaxDepth) :-
```

```
    MaxDepth > 0, Node ---> or:Nodes,
```

```
    member(Node1,Nodes), Depth1 is MaxDepth - 1,
```

```
    solve(Node1, Tree, Depth1).
```

```
solve(Node, Node ---> and:Trees, MaxDepth) :-
```

```
    MaxDepth > 0, Node ---> and:Nodes,
```

```
    Depth1 is MaxDepth - 1,
```

```
    solveall(Nodes, Trees, Depth1).
```

# Basic AND/OR search procedures

## ◎ Searching AND/OR graphs in Prolog

### ◆ Iterative deepening

```
iterative_deepening(Node, SolTree) :-  
    trydepths(Node, SolTree, 0).  
trydepths(Node, SolTree, Depth) :-  
    solve(Node, SolTree, Depth)  
    ;  
    Depth1 is Depth + 1,  
    trydepths(Node, SolTree, Depth1).
```

# Best-first AND/OR search

## ⊙ Heuristic estimates & the search algorithm

- ◆ Extending the AND/OR representation

a ---> or: [b/1,c/3].

b ---> and: [d/1,e/1].

c ---> and: [f/2,g/1].

e ---> or: [h/6].

f ---> or: [h/2,i/3].

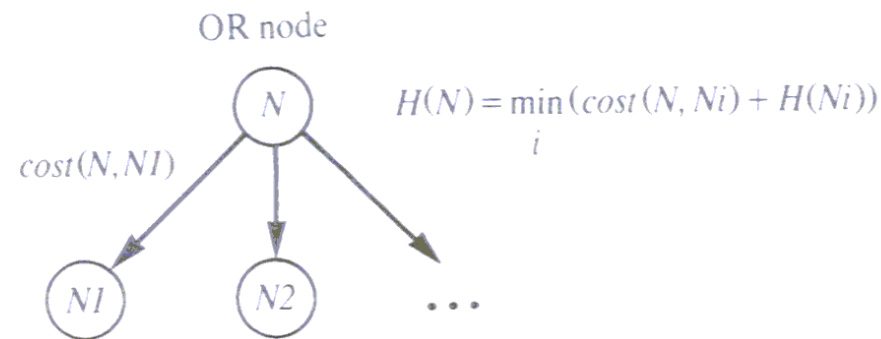

goal(d).

goal(g).

goal(h).

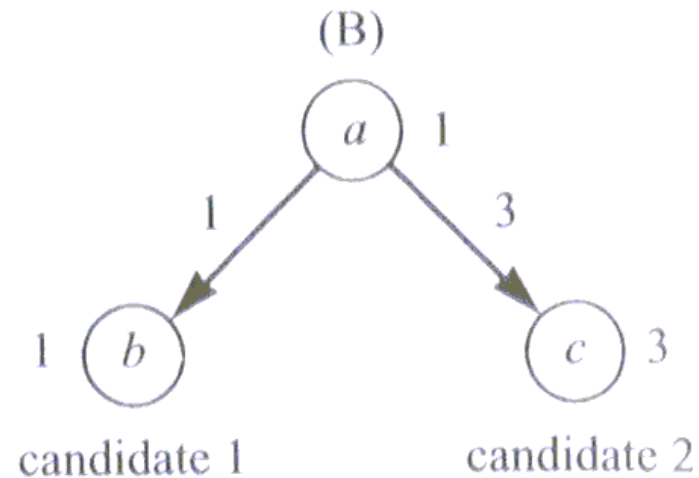

# Best-first AND/OR search

## ⊙ Heuristic estimates & the search algorithm

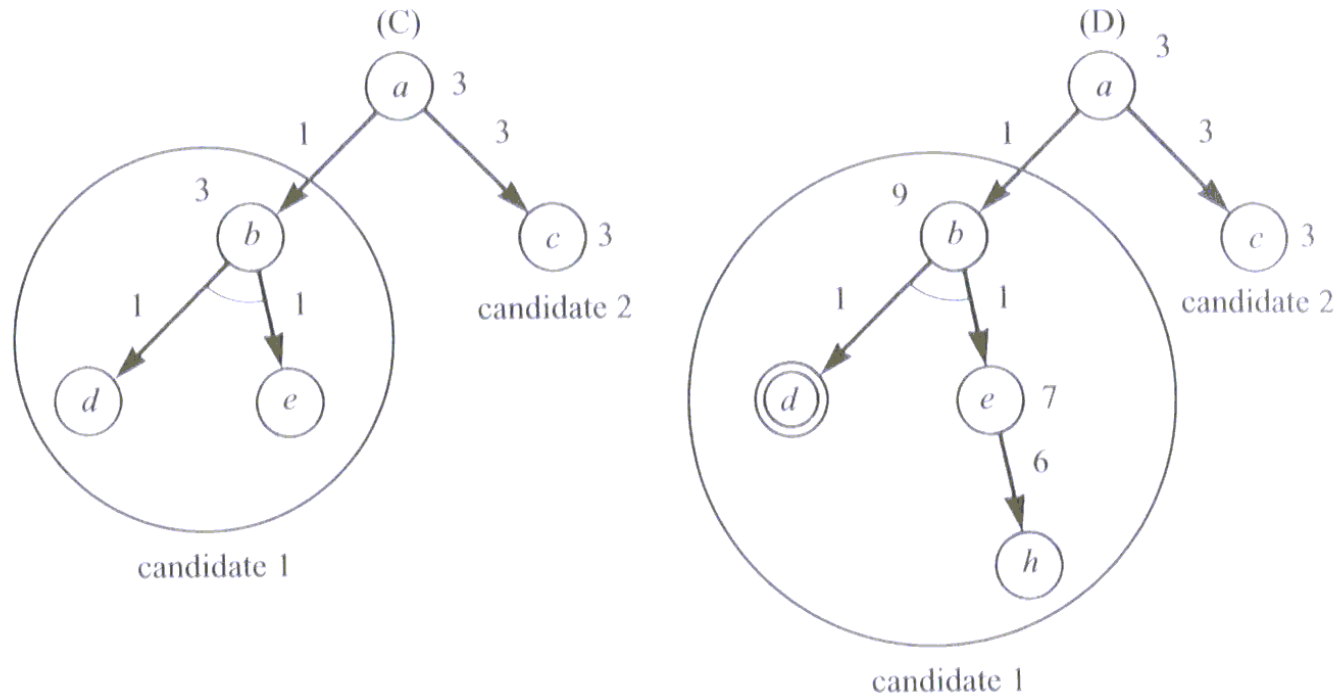

# Best-first AND/OR search

⊙ Search with  $F(N) = \text{cost}(M,N) + H(N)$

# Best-first AND/OR search

◎ Search with  $F(N) = \text{cost}(M,N) + H(N)$

# Best-first AND/OR search

© Search with  $F(N) = \text{cost}(M,N) + H(N)$

# Best-first AND/OR search

## ◎ Example: route finding

- ◆ the road map:  $s(\text{City1}, \text{City2}, D)$
- ◆ key point:  $\text{key}(\text{City1}-\text{City2}, \text{City3})$ 
  - $\text{key}(a-z, f).$
  - $\text{key}(a-z, g).$
- ◆ two kinds of problems
  - $X-Z$ : find a route from X to Z
  - $X-Z$  via  $Y$ : find a route from X to Z through Y

# Best-first AND/OR search

## ◎ Example: route finding

`:- op(560, xfx, via).`

`X-Z --> or: ProblemList :-`

`bagof((X-Z via Y)/O, key(X-Z, Y), ProblemList), !.`

`X-Z --> or: ProblemList :-`

`bagof((Y-Z)/D, s(X, Y, D), ProblemList).`

`X-Z via Y --> and: [(X-Y)/O, (Y-Z)/O].`

`goal(X-X).`

# Summary

- ⊙ **AND/OR graph representation of problems**
- ⊙ **Examples of AND/OR representation**
- ⊙ **Basic AND/OR search procedures**
- ⊙ **Best-first AND/OR search**
